

MOLITECNICA SUD: a family passion for MILLING EQUIPMENT manufacturing

The Molitecnica Sud company is a factory specialized in designing, building, and maintenance of plants for: flour and feed mills, bakery and pasta factories, storage, metalworking, and ancillary equipment. The long experience acquired in the realization of several plants and the constant research to find new technological solutions, allow the company to offer different types of plants for the food industries and specially flour mills and feed mills with the turn-key formula.

Molitecnica Sud also boasts a specialised know-how in the custom solutions for plants to be fitted in reduced spaces: compactness, high productivity, output, hygiene, reduced energetic consumptions, easy and safe functionality, are the qualifying characteristics of such systems.

The Molitecnica Sud is the direct and natural evolution of a life full of passion, desire, work and sacrifice: the founder of Molitecnica Sud, Giuseppe Pellicola (whose nickname is Peppino), in fact, has always worked in the milling business. Since he was a young man he was a milling technologist in several milling plants in Altamura, until - driven by the desire to produce what he had always cared for - he decided to undertake, in the late 70's, this new work: manufacture milling equipment.

The activity began in a small factory of 150 square meters, where, thanks to the help of his sons, he started to design and build milling machinery.

Thanks to Peppino's ability to establish a friendly relationship with customer, based on confidence and professionalism, the company soon reached significant targets. Due to a significant increase in demand, in 1981 the company moved into a bigger plant of over 500 m², which was expanded to 1,200 m² in the 90's.

Today Molitecnica Sud is headed by the four sons of Giuseppe Pellicola who remains as a guide. The presence of his sons, Domenico, Luigi, Alfonso, and Carlo has always been important within the company. Their ability to make good use of Peppino's knowledge combined with their ability to specialize the company in other areas was the reason for the development of Molitecnica Sud which has enlarged the business.

The construction of the new factory is an example: the new plant of 3,500 square meters (on a total surface of 12,000 square meters), will implement the historic headquarters.
