Molitecnica Sud: Italian milling and food culture around the world

Molitecnica Sud is a metalworking company founded in Altamura, Italy, more than 50 years ago by **Giuseppe Pellicola**, with the aim of building unique machines for mills. His four sons developed the company to such an extent that it is now able to satisfy new sectors. Today, the third generation of the family works to carry on the same founder's passion, but with a more global vision: "spreading Italian milling and food culture

around the world". To achieve this goal, Molitecnica Sud has built up a network of partners to offer complete solutions for the food industry, also for the foreign market. In addition to milling plants, the company is now able to supply pasta and industrial bakery plants, compact milling plants, stockage systems, auxiliary machines and 24-hour automatic shops. Committed to the national and international market, it is capable to satisfy the

Milling plant produced by Molitecnica Sud.

needs of customers from all over the world, in Eastern Europe, in the African continent and the Middle East.

The results in global markets have also been achieved through the 100% Made in Italy certification. In fact, the Institute for Protection of Italian Manufacturers attests that Molitecnica Sud's products respect the requirements of the "IT01 - 100% Original Italian Quality" system. This means not only that the machines and the plants are produced exclusively in Italy, but also certifies the quality of the materials used and the respect of work, hygiene and safety rules.

In addition, Molitecnica Sud offers a rich package of services: preventive analysis, grinding diagrams, personnel training, remote assistance, maintenance, consultancy and pre- and post sale technical assistance. Its flagship is certainly customised design, dealing with tailor-made projects, analysing the requirements of each individual customer.

The Research and Development (R&D) area is fundamental, because the solutions proposed are the result of in-depth studies. Molitecnica Sud has embraced Industry 4.0 to make plants highly technological. In fact, it is possible to request plants with sensor technology capable of providing real-time data on production, safety and machine status. In addition, the possibility of automation is offered to automate and lead the plants remotely. One of the most important innovations is the use of Augmented Reality. Molitecnica Sud has recently implemented this technology to show a preview of the installations requested. The technicians go to the customer's empty factory and, with the use of visors, they are able to project the machines in real size in the position where they will be installed.
